

Huo, J., Petrenko, A. "Covering Transitions of Concurrent Systems through Queues" In *Proceedings of the 16th IEEE International Symposium on Software Reliability Engineering (ISSRE'05)*, pp. 335-345. Chicago, IL, USA, November 8-11, 2005.

Abstract

By testing a concurrent system through queues, we seek a conclusive answer to whether a given transition of the specification of the system is executed. We define transition coverage through queues and find testing strategies to cover the transition in question with and without fairness, respectively.

Keywords: model-based testing, transition coverage, concurrency, non-determinism
